EaSI TA Workshop

Development of Impact Assessment Methodologies

This 1-day workshop, organised by the European Microfinance Network (EMN) in the framework of EaSI Technical Assistance, was proposed for Romanian Credit Unions in order to introduce them to best practices in social impact measurement and assessments and to draw attention to the first steps required to start the process of developing their own tools.

The workshop looked at current good practices, some relevant case studies and also at the different areas of improvement of social performance assessment and reporting in line with the European Code of Good Conduct for Microcredit Provision.
